

# What does long work leave behind?

A DeBERTa sentiment-analysis case connects data, experiments, figures, a paper and a public record. The OpenCorvus proposition: multi-stage work should leave inspectable deliverables.

## SIX STAGES IN THE PUBLIC PROCESS INDEX

- |    |                        |    |                          |
|----|------------------------|----|--------------------------|
| 01 | Model + data           | 02 | CUDA experiments + web   |
| 03 | Architecture + figures | 04 | Literature + paper draft |
| 05 | Review + final paper   | 06 | Publication audit record |

## VALIDATION MACRO-F1 / THREE FIXED RUNS

1,800 training / 700 validation examples; seed 42, one epoch. After validation selection, the selected run reports test macro-F1 0.8361 on 1,336 examples. Macro-F1 averages class F1 scores; arithmetic rechecked from public confusion matrices.

### THE LIMITATIONS TRAVEL WITH THE RESULT

One seed and one restaurant domain. Configurations also differ in learning rate; this is not a causal ablation or a model ranking. Original full training logs are unrecoverable; weights and raw predictions are external. This brief checks public summaries, not a fresh training run or the full execution history.

Inspect the sources: [experiments](#) / [metrics + matrices](#) / [process index](#) / [limitations + rights](#)

Public access does not grant redistribution rights to the case code, documents or models.

# 长程任务，留下什么？

一个 DeBERTa 情感分析案例，把数据、实验、图表、论文和公开记录串在一起。OpenCorvus 主张：让多阶段工作留下可以检查的交付。

公开过程索引中的六个阶段

- |            |               |
|------------|---------------|
| 01 模型与数据   | 02 CUDA 实验与网页 |
| 03 架构与实验图表 | 04 文献与论文初稿    |
| 05 独立审阅与定稿 | 06 公开审计与发布记录  |

验证集 macro-F1 / 三个固定运行

每次训练 1,800 条，验证 700 条；seed 42，1 epoch。按验证集选择后，选中运行的测试 macro-F1 为 0.8361（1,336 条）。macro-F1 为各类别 F1 的平均值；此处按公开混淆矩阵复算。

## 证据边界，也是案例的一部分

单一种子、单一餐饮领域；不同配置也改变了学习率，不能推导因果优势或模型排名。完整原始训练日志不可恢复，权重与原始预测文件不在公开仓库中。本简报复核公开摘要，未重跑训练，也未独立确认完整运行过程。
